DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I. Claims 1-17, drawn to a subcombination system for processing a material, classified in class 241 and including subclass 65.

Group II. Claims 18, drawn to a combination system for processing a material with a temperature equalizing system, classified in class 241 and including subclass 152.2.

The inventions are distinct, each from the other because of the following reasons:

Invention of Group I and Group II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed as evidenced by claim 1. The subcombination has separate utility such as it can obviously be used in any crushing machine and is not limited to the particular crushing machine of Group I.

During a telephone conversation with Carl Thomsen on July 28, 2005 a provisional election was made without traverse to prosecute the invention of Group I, claim 1-17. Affirmation of this election must be made by applicant in replying to this

Office action. Claim 18 is withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Upon further review of Group I (claims 1-17), a further species election is required because this application contains claims directed to the following patentably distinct species of the claimed invention:

- Species I. Drawn to a system for processing tire or tire pieces including Figures 1-3 and including claims 1-6, 12, and 13;
- Species II. Drawn to a system for processing a material including rubber granules including Figure 4 and including claims 1-4 and 7-11; and
- Species III. Drawn to a system for processing a material including a granulate freeze system including Figure 8 and including claims 1-4 and 14-17.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, there are no generic claims.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
